

FIZA SHAIKH

Cybersecurity Analyst / SOC Analyst L1 / Blockchain Security

fiza.sk293@gmail.com | +353 870339836 | Ireland

[LinkedIn](#) | [Portfolio](#)

SUMMARY

Cybersecurity Analyst with professional experience in SOC operations, SIEM alert triage, security monitoring, vulnerability management and incident response. Experienced with Splunk, Azure AD and ServiceNow, with a track record of triaging 30+ alerts per shift and improving patch compliance from 67% to 91%. First Class Honours MSc graduate with Microsoft SC-200 and hands-on projects in security analytics and digital forensics.

SKILLS

SOC & Security Operations	Splunk, Microsoft Sentinel, Security Monitoring, SOC Operations, Alert Triage, Log Analysis & Correlation, Incident Response, Incident Documentation, Threat & Vulnerability Management, Anomaly Detection, IDS/IPS
Identity, Cloud & Networking	Azure AD, IAM & Identity Governance, GCP Cloud Security, Network Segmentation (VLAN), DHCP/DNS, Routing (RIP/OSPF), NAT, Network Access Control (NAC)
Security Investigation & Forensics	Digital Forensics, Security Event Investigation, Authentication Analysis, Account Anomaly Detection, Incident Escalation, Security Monitoring
Programming & Security Analytics	Python, SQL, React/JavaScript, Machine Learning, Isolation Forest, Autoencoders, SHAP, Streamlit
Blockchain & Governance	Blockchain Forensics, Monero RPC, Smart Contract Security (Solidity), Cryptographic Protocols, ISO/IEC 27001

EXPERIENCE

Teleperformance (TP)

Junior SOC Analyst

May 2023 – Dec 2024

- Triaged 30+ Splunk security alerts per shift, analysing security events, distinguishing genuine threats from non-actionable activity, and escalating confirmed or suspicious events in line with incident-response procedures.
- Investigated authentication and account anomalies in Azure AD by reviewing sign-in activity and security logs to identify suspicious access patterns and support account-security investigations.
- Documented investigations, findings and escalations in ServiceNow, maintaining clear case records and handover information for continuity across SOC shifts.
- Wrote and maintained 12 incident-response runbooks covering common alert types, standardising triage, investigation and escalation procedures and improving consistency across security operations.

IT Security Analyst

Jul 2022 – Apr 2023

- Conducted monthly vulnerability scans across client infrastructure and tracked remediation actions through to completion, increasing patch compliance from 67% to 91% over six months.
- Monitored SIEM alerts and supported security log analysis, incident documentation and follow-up activities within the security operations workflow.

PROJECTS

[Privacy-Preserving Blockchain Forensics](#) / *Master's Dissertation Python, Monero RPC, Isolation Forest, Autoencoders, SHAP, Streamlit*

- Built an end-to-end forensics pipeline on a locally synchronised Monero blockchain node to extract transaction behaviour signals, including timing, frequency, and structural patterns.
- Detected anomalies across unlabelled transaction data without exposing user-identifying information, preserving privacy while enabling investigative analysis.
- Applied Isolation Forest and Autoencoder models to achieve explainable anomaly detection, using SHAP to generate interpretable outputs for each flagged transaction.
- Delivered an interactive Streamlit dashboard demonstrating the analysis at scale, supporting real-world financial crime investigation use cases.
- Combined blockchain forensics, machine learning, and privacy-preserving analytics into a single working pipeline as a Master's dissertation project.

[Log Detective](#) / *Browser-Based SOC Investigation Game*

React, JavaScript, Vite, Framer Motion, Lucide React, HTML, CSS, JSON

- Designed and built a browser-based SOC investigation game where players analyse simulated security logs, classify events, and earn XP for accurate threat detection.
- Modelled realistic SOC scenarios, including brute-force attacks, phishing, suspicious PowerShell activity, rogue admin accounts, and ransomware indicators alongside legitimate user behaviour, to sharpen true-positive vs. false-positive judgment.
- Developed the front end with React, JavaScript and Vite, using Framer Motion for interactive UI feedback and Lucide React for iconography.
- Deployed the application on Vercel and used Claude Code throughout development for scaffolding, UI iteration and debugging, applying AI-assisted development practices to a security-focused build.

CERTIFICATIONS

- [SC-200: Microsoft Security Operations Analyst](#) | 2026
- [Junior Cybersecurity Analyst Career Path \(Cisco\)](#) | 2026
- [ISO/IEC 27001 Information Security Associate \(SkillFront\)](#) | 2026
- [Introduction to Digital Forensics \(Security Blue Team\)](#) | 2026
- [Google Cybersecurity Professional Certificate \(Google\)](#) | 2025
- [Introduction to Cloud Identity \(Google Cloud Security\)](#) | 2025
- [Ethical Hacking Essentials \(EC-Council\)](#) | 2023

EDUCATION

MSc in Blockchain Technologies & Applications — First Class Honours (1:1)

Atlantic Technological University (ATU) | Graduated 2026

BSc in Information Technology

Jai Hind College | 2019 – 2022
