

FIZA SHAIKH

Cybersecurity Analyst | SOC & Threat Analysis | Blockchain Security
fiza.sk293@gmail.com | +353 870339836 | Letterkenny, Co. Donegal, Ireland
[LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [TryHackMe Writeups](#) | [Credly Badges](#)

PROFESSIONAL SUMMARY

Cybersecurity professional with hands-on experience in threat and vulnerability management, SIEM platforms, network security and blockchain forensics. Holds an MSc in Blockchain Technologies (First Class Honours) and industry certifications from Google, Cisco, EC-Council and IBM. Proven ability to apply machine learning to privacy-preserving security analysis and to detect anomalies in decentralised systems. Actively completing TryHackMe labs and open to on-site, hybrid or remote roles across Ireland.

CORE COMPETENCIES

Security Operations & Analysis: SIEM, Threat & Vulnerability Management, Incident Response, Digital Forensics, Anomaly Detection, Log Analysis and Security Monitoring

Offensive & Defensive Tools: Burp Suite, Wireshark, Nmap, PortSwigger Labs, TryHackMe and Cisco Packet Tracer

Programming & ML: Python, Java, PHP, SQL, Isolation Forest, Autoencoders, TensorFlow/Keras, SHAP, PCA and Streamlit

Blockchain & Cryptography: Monero RPC, Smart Contracts (Solidity), DeFi, Blockchain Forensics, Cryptographic Protocols and ISO/IEC 27001

Cloud & Networking: Cloud Identity (Google Cloud), VLAN Configuration, DHCP, RIP/OSPF, NAT and Network Access Control

PROFESSIONAL EXPERIENCE

IT Security Support Analyst | Teleperformance (TP)

Jul 2023 - Aug 2024 | Mumbai, India

- Monitored live security events across the enterprise using SIEM tooling, resolving an average of 30+ alerts per shift and reducing the team's open queue by 40% within the first quarter through consistent triage and accurate severity classification.
- Identified a recurring pattern of failed authentication attempts across 3 client accounts that manual review had missed; escalated as a coordinated credential stuffing attempt which was blocked before any data was accessed.
- Ran monthly vulnerability scans across client infrastructure, documented findings in structured reports and tracked remediation progress, bringing the critical patch compliance rate from 67% to 91% over 6 months in collaboration with the infrastructure team.
- Built internal documentation covering 12 common incident types, cutting average analyst resolution time for those scenarios by approximately 20 minutes per ticket by giving junior team members a reliable reference rather than escalating every edge case.
- Skills applied: Threat & Vulnerability Management, Incident Response, SIEM, Security Monitoring and Log Analysis.

EDUCATION

MSc in Blockchain Technologies & Applications

2025 - 26

Atlantic Technological University (ATU), Donegal, Ireland | **First Class Honours (1:1)**

BSc in Information Technology

2020 - 23

Jai Hind College, Mumbai, India

KEY PROJECTS

Privacy-Preserving Blockchain Forensics (Master's Dissertation) |

Python, Monero RPC, Isolation Forest, Autoencoders, SHAP, Streamlit

- Built an end-to-end forensics pipeline that extracted and analysed Monero transaction behaviour including timing, frequency and structural signals using a locally synchronised blockchain node and unsupervised ML without exposing any user-identifying data.
- Achieved anomaly detection across unlabelled transaction data using Isolation Forest and Autoencoder models with SHAP providing interpretable outputs for each flagged transaction, making forensic findings auditable and explainable.
- Delivered an interactive Streamlit dashboard demonstrating how privacy-preserving analysis can support responsible blockchain forensics at scale.

AI-Powered Blockchain Mining Simulator |

Python, TensorFlow, Keras, Streamlit

- Developed a real-time web application comparing traditional Proof-of-Work mining against a neural network-driven approach, demonstrating a measurable reduction in computational steps needed to reach a valid hash without compromising blockchain validation or decentralisation.

Directory Traversal Attack Simulation |

Burp Suite, PortSwigger Labs

- Conducted structured security testing to identify and exploit directory traversal vulnerabilities by manipulating URL parameters to access restricted files such as /etc/passwd then documented input validation failures and effective security header configurations to support remediation guidance.

CERTIFICATIONS

Google Cybersecurity Professional Certificate (Google, Jul 2025)

Junior Cybersecurity Analyst Career Path (Cisco Networking Academy, Mar 2026)

ISO/IEC 27001 Information Security Associate (SkillFront, Apr 2026)

Introduction to Digital Forensics (Security Blue Team, Feb 2026)

Encryption & Cryptography Essentials (IBM, Jul 2025)

Ethical Hacking Essentials (EC-Council, Apr 2023)

Blockchain Security (Infosec)

Solidity Advanced: Secure Smart Contracts & DApp Development (Packt) |

Introduction to Cloud Identity (Google Cloud Security)

ADDITIONAL

Right to work in Ireland (Stamp 1G).

Open to on-site, hybrid and remote positions across Ireland.
